moleculeID

moleculeID uniquely identifies a molecule in the database. It has three parts, example: 23705_734_2030001. The first part indicates *GroupID*, the second part indicates *RunID*. So, if it is from run 0, it will have 734 in the second part, indicating version 3.4 of INCA software. The third part is the stretch factor of the molecule number. So 2030001 indicates a stretch factor 203 of molecule 1 of group 23705.

alignedChr

Aligned Chromosome number. For human it will vary between 1 and 23.
